No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

INFORMATION FOR AUTHORS

The *Journal of Mathematical Psychology* publishes research articles, monographs and reviews, notes and comments, and book reviews in all areas of mathematical and theoretical psychology. Empirical research directly relevant to theoretical questions within psychology is welcome. Papers on fundamental measurement and on mathematical models, such as those based on connectionist, other neural network, or information processing concepts continue to be of special interest to the Journal. Also welcome are theoretical work and empirical research bearing on models in such areas as animal behavior, artificial intelligence and computer simulation of psychological processes, decision theory, human factors and human computer interaction, learning and memory, motivational dynamics, problem solving, psycholinguistics, psychophysics, psychometrics (if the work bears on the explication of psychological concepts or process models), and sensation and perception.

Manuscripts should be submitted (in quadruplicate) to *Journal of Mathematical Psychology*, Editorial Office, 525 B Street, Suite 1900, San Diego, California 92101-4495. All correspondence will be handled by First Class Mail or by telephone to ensure prompt and efficient processing of manuscripts.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Mathematical Psychology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Research articles, monographs, and reviews will be reviewed by an appropriate member of the Board of Editors who will select at least two additional referees to assist him or her. Ordinarily, a note or comment will be reviewed by at least one referee although the Editor may act on these unilaterally. Referees have the option of remaining anonymous to authors. Board members will correspond directly with the authors of manuscripts that require revision prior to acceptance. Rejected manuscripts and final acceptance of manuscripts, however, will be handled by the Editor, Dr. Thomas S. Wallsten. An article will not be considered in press until the author receives a letter so stating from the Editor. Book reviews will be solicited and handled by Dr. A. A. J. Marley.

Form of Manuscript. Manuscripts should be prepared on high quality bond paper with wide margins using double spacing throughout. At least four copies should be submitted, each copy to include all figures and tables. Each page of the manuscript should be numbered. The first page should contain the article title, author's name and affiliation. At the bottom of this page list the name and complete mailing address of the person to whom proofs are to be sent. The second page should contain an abstract.

Authors are requested to follow the instructions given by the *Publication Manual of the American Psychological Association*, 3rd edition, 1983. Certain modifications are listed below.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Limit numbering only to those equations that are in the main stream of the mathematical development. Refer to equations as Eq. (3) or simply (3), except at the beginning of a sentence when the word Equation should be spelled out. Equations should be punctuated to conform to their place in the syntax of the sentence.

Abbreviations and Symbols. Please do not use the abbreviations *S*, *E*, and *O* for subject, experimenter and observer. Also do not underline symbols in text or formula, for they will be routinely set in italics. A typewritten list of identified symbols *must* be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Do not use final periods with units of measure that are abbreviated (cm, s, kg, etc.) in text or in tables, except for "in." (inch).

Figures and Tables. All illustrations are to be considered as figures, and each graph or drawing should be numbered in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page ($5 \times 6 \frac{3}{4}$ inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double spaced) above the table. Footnotes to tables should be identified by superscript letters and placed at the bottom on the page containing the table. Footnotes in the text and title should be identified by superscript numbers and listed consecutively on a separate page.

References. Literature references in the text should be cited by author's surname and the year of publication, e.g. Roe (1980); Roe *et al.* (1981); Roe and Jones (1983, p. 150) (for references to a specific page). If a reference has more than two authors, the citation includes the surnames of all authors at the first mention, but later citations of the same reference include only the surname of the first author and the abbreviation "*et al.*" Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g. (Roe, 1980a, 1980b). Literature citations in the bibliography should be arranged alphabetically according to the surname of the author. Journal titles should be written out in full rather than abbreviated. Please note style of capitalization and punctuation for journal articles, books, and edited books in the following examples :

- TVERSKY, A., RINOTT, Y., & NEWMAN, C. M. (1983). Nearest neighbor analysis of point processes: Applications to multidimensional scaling. *Journal of Mathematical Psychology*, 27, 235-250.
- PURI, P. S. (1979). On certain problems involving nonidentifiability of distributions arising in stochastic modeling. In J. S. Rustagi (Ed.), *Optimizing methods in statistics* (pp. 403-418). New York: Academic Press.
- NORMAN, M. F. (1977). *Markov processes and learning models*. New York: Academic Press.

Proofs and Reprints. Proofs will be sent to the author, with reprint order forms. Authors will be charged for alterations in excess of 10 % of the cost of composition. Fifty reprints of each article will be provided free of charge.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Mathematical Psychology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

Special subscription rates are available for regular and student members of the Society for Mathematical Psychology. If you are not yet a member, you may request application forms from Dr. Robert L. Stout, Secretary Treasurer, Society for Mathematical Psychology, Butler Hospital, 345 Blackstone Blvd., Providence, Rhode Island 02906. If you are already a member, you may obtain information concerning special rates from the Publisher, Academic Press, Inc., Subscription Fulfillment Department, 6277 Sea Harbor Drive, Orlando, FL 32887-4900.
